Approved by: CEO

This Policy is inspired by the principles of Environment safeguarding, thus it is designed to ensure that the Environment is always protected while performing all activities in the offices, worksites and other workplaces, in compliance with Rules Regulations and Standards that the Organization has chosen to join.

The concrete realization of the above principles is achieved through the design, construction and maintenance of an Environmental Management System in compliance with the requirements of the latest international standard ISO 14001 standard.

The Organization is therefore committed to:

- Define and implement methodologies for the identification of aspects and assessment of impacts to the Environment; and the design of appropriate measures of prevention, protection and control of impacts, taking related technological and social organizational variables into due account;
- To prevent potential sources of pollution, reducing the consumption of natural resources and the use of facilities available through their depletion, reducing the quantity of waste to be disposed to landfill, and to continually improve the Management System;
- Rigorously comply with the compliance obligations arising from existing and future legislation on Environment and, where considered appropriate, work with more stringent limits than those provided by Law;
- Ensure that all employees are adequately informed and instructed on the contents of this policy and all Environmental subjects relating to their activities, both upon their recruitment and during the whole period of employment in the Organization;
- Search for suppliers of goods and services that, in intents and business conduct, agree with our principles of protecting the Environment and develop a collaborative and stable relationship with mutual benefit;
- As a commitment to continual improvement, at least on annual basis to perform a review of the Organization's environmental performance, when an assessment on the adequacy and the implementation of EMS is carried and measurable objectives, consistently with business activities and aspects which are identified as the most critical, are established, monitored, communicated, updated and documented.
- Arrange and implement an adequate internal audit program, both in the office and, as practicable, at the worksites.
